

CULTIVATE PRODUCTIVITY

In today's market, it's not enough to be good at what you do. Knowing the product to its fullest allows your trained staff to improve product development and cut cycle time to help you better meet your customers' needs.

CATIA MENTORING PROGRAM

AscendBridge Solutions is pleased to present our CATIA Mentoring Service Offering.

There is a direct correlation between proficiency and understanding when organizations take advantage of the AscendBridge CATIA Mentoring program in conjunction with the Dassault Education curriculum.

This service provides a proven methodology to assist your organization to quickly realize the value of CATIA, while reducing the over-all learning curve.

Deliverables and Benefits

AscendBridge recommends that CATIA classroom training be followed by a succession of Mentoring days. Mentoring is the process where an experienced Application Engineer will work side-by-side your engineer to assist them with their daily product development process and requirements. The AscendBridge associate will review the products that you build and the methodology used to design these products. They will analyze these methods and work with your engineers to find better, quicker ways to design or manufacture your products.

Tips and techniques will be shared and new ideas explored to improve the overall effectiveness of your people. Through this collaborative process, AscendBridge and your associates will develop Best Practices and create documentation that will be used to train other members of your staff. This documentation will provide the assurance that your entire team is unified with regards to design standards and techniques.

This process is very effective with new hires who need to ramp up quickly on your applications, products and design techniques.

You will achieve better results, save time and increase efficiency.

To schedule a mentoring program for your team or for more information please call 905-944-0047 or email catia@ascendbridge.com
